Uriel Antonio Gomez Madriz

Technical Game Designer | Narrative Designer

Secondary Roles: Programmer | Sound Designer

Phone: +506 7110 8289
Email: urielgomezmadriz@gmail.com
Languages: Spanish (Native) | English (B2)

Professional Profile

Multidisciplinary Game Designer specializing in technical game design, gameplay systems, and prototyping. Experienced in designing and implementing game mechanics, developing custom tools, documenting technical systems, and translating mathematical and mechanical concepts into functional prototypes.

Currently pursuing a Bachelor's degree in Digital Animation at Universidad Latina, Costa Rica, with foundational studies in Software Engineering, including programming and requirements engineering.

Additional experience in narrative design, worldbuilding, and maintaining continuity across interconnected stories and game projects. Self-taught music composer with knowledge of orchestral and experimental composition, music theory, and musical notation.

Important Note Before Continuing

This document is extensive because I'm constantly learning and developing new skills. I've tried to simplify the process as much as possible by making my public work directly accessible through a single GitHub repository.

The idea is to make recruiters' lives easier. A few years ago, I was actually in a recruiter's position myself, even though that experience isn't listed in this document.

If you prefer a quicker overview or would rather see the actual work for yourself, feel free to visit:

GitHub Portfolio – Uriel Gomez

And remember: **take a book, ask me later about it!**

And yes, there's zero code in this document. Links to the actual source code can be found in the repository's README.md. This is intentional: the repository is organized so that anyone who wants to explore something specific can go directly to it.

Technical Skills

Game Design: Technical Game Design, Gameplay Systems, Game Mechanics, System Design, Level Design (Greyboxing), Game Economy Design, Technical Documentation, Project Feasibility Analysis.

Programming Languages: C# (Primary), C++, Lua, GLSL (Basic Shader Programming).

Engines & Development Tools: Unity, Git, GitHub, Visual Studio Code, JetBrains IDEs.

Narrative Design: Worldbuilding, Story Development, Character Development, Narrative Documentation, Shared-Universe Continuity.

Music & Audio: Orchestral Composition, Experimental Music, Music Theory, Musical Notation, Sound Design.

Audio & Music Software: FL Studio, MuseScore.

Productivity & Project Management Tools: Microsoft Excel (Basic), Miro, ClickUp.

Microsoft Excel (Basic), Miro,Click up.

Key Personal Projects

Narrative Design | Chronostasis: Kingdom of Chains (2018–Present)

Began developing *Chronostasis: Kingdom of Chains* in 2018, initially focusing on the first installments of a long-form book saga that gradually expanded into an interconnected fictional universe. The narrative continues to evolve through occasional additions and further development. Selected materials are available in my GitHub portfolio repository as part of my collection of previous work; not all content has been made publicly available.

Applied Skills:

- Worldbuilding and World Design
- Character Design and Development
- Long-Form Narrative Structure and Expansion
- Conceptual Design
- Book-to-Video Game Narrative Adaptation

Musical Composer | Gummies Candy

Resistance Entertainment | March 2023

Initially joined Resistance Entertainment, a Panama-based studio operating remotely, as a comic writer. Later transitioned to the game's music department to address an urgent production need, composing and producing the complete soundtrack of four original tracks within 48 hours.

Note: Due to internal administrative changes at the studio, my contribution was not included in the final release credits. Original project files and musical scores are available upon request.

Applied Skills:

- Music Composition and Production Under Tight Deadlines
- Music Arrangement and Basic Harmony
- Game Music Production
- Rapid Execution in Response to Production Needs

Project Director & Game Designer | Broken Leven Heart

February 5, 2025 – October 2, 2025

Directed the design and development of an original collectible card game (CCG), creating a comprehensive Game Design Bible documenting its core mechanics, player interactions, card systems, rules, and system architecture. The project developed into a refined tabletop prototype supported by system documentation and visual assets, with development progressing through an iterative design process.

The project also serves as part of the adaptation of the *Chronostasis* saga from its original book format into interactive game experiences.

Applied Skills:

- **Creative Direction:** Maintaining narrative, visual, and thematic consistency.
- **Technical Documentation:** Authoring Game Design Documents (GDDs) and a Macro Design Specification.
- **Game Systems Design:** Defining core mechanics, gameplay loops, and logic flowcharts.
- **Conceptual Testing:** Evaluating mechanics and system interactions through theoretical analysis.

Lead Developer | Obscure Engine for Shell (C#, C++)

April 14, 2026 – Present

Developing a custom, code-driven game engine and prototyping framework in C# and C++, designed to operate through a command-line environment without requiring a graphical interface. The project emphasizes a lightweight execution environment and modular architecture, aiming to keep its systems accessible and adaptable across different environments.

The engine serves as a research and prototyping platform for gameplay AI, procedural map generation, and 2D/isometric spatial logic. It also supports the development of reusable libraries and isolated test environments for experimenting with gameplay systems independently of commercial engines. The project also serves as a hands-on environment for deepening my understanding of C# and exploring its capabilities through practical implementation.

Applied Skills:

- **Engine Development:** Designing and implementing engine architecture, libraries, and supporting tools.
- **Modular Systems Design:** Developing reusable components that can function independently of the main engine.
- **Gameplay Research & Prototyping:** Implementing and testing algorithms and gameplay mechanics.
- **Command-Line Development:** Building and testing systems without dependence on a graphical interface.

Game Economy Designer | Starlight Collector

July 11, 2025 – July 17, 2025

Designed a theoretical game economy framework for a free-to-play (F2P) simulator, focusing on data-driven systems, probabilistic progression, resource scarcity, and player retention loops.

The resulting documentation serves as a mathematical and architectural study of game economy design, exploring quantitative methods for modeling progression, resource distribution, and system balance independently of a final implementation.

Applied Skills:

- **Player Behavior Analysis:** Applying behavioral principles to game system design.
- **Quantitative Game Economy Design:** Using mathematical models to analyze and balance in-game economies.
- **Probabilistic Systems Design:** Modeling systems based on statistical distributions and probabilistic outcomes.
- **Core Gameplay Loop Design:** Structuring progression and resource acquisition loops.

- **Game Theory:** Applying mathematical concepts from game theory to video game systems.

Musical Composer & Audio Designer | FNF vs Chuysmik — Beta 1.5

September 7, 2025 – December 11, 2025

Responsible for technical audio auditing and narrative sound design. Analyzed the project's existing soundtrack to identify structural and technical issues, documenting findings and proposing solutions to improve audio quality and integration within the game.

Additionally, composed and produced music for narrative interludes featuring in-game dialogue, helping maintain atmospheric consistency between the narrative and gameplay experience.

Applied Skills:

- **Audio Auditing & Technical Troubleshooting:** Identifying audio issues and documenting proposed solutions for the development team.
- **Narrative Sound Design:** Composing atmospheric music for narrative-driven interludes.
- **Harmonic Analysis & Soundscape Design:** Applying advanced harmonic theory to develop complex sonic textures and soundscapes.
- **Technical Documentation:** Preparing audio specifications and technical workflows to support the project's development pipeline.
- **Audio Post-Production:** Mixing and mastering audio assets to maintain consistency across the project.

Orchestral Composer & Audio Designer | Wildoria

September 11, 2025 – February 9, 2026

Worked on *Wildoria* for approximately three months as an orchestral composer, with responsibilities extending beyond music composition to include sound effects creation, game audio planning, and overall musical design.

Applied Skills:

- **Music & Sound Design:** Audio production workflow, from reference analysis and concept development to implementation.
- **Music Theory:** Orchestral composition, musical notation, and reharmonization.
- **Audio Engineering:** Sound effects synthesis, sound design, and final mastering.
- **Audio Implementation Planning:** Planning audio systems and their integration into the game.

Education

Bachelor's Degree in Digital Animation | Universidad Latina, Costa Rica
2026 – Present

- Completed first academic term.
- Currently pursuing the degree.

Software Engineering Studies | Universidad Fidélitas, Costa Rica
2025

- Completed coursework in Requirements Engineering, Basic Programming, and Introduction to Programming.
